

RUBIX

FOR BETTER SCHEDULES
AND HIGHER PRODUCTIVITY

-Software by Aegis Project Controls-

A GAME CHANGER FOR SCHEDULERS

RUBIX is a top of the line applications suite targeted towards project controls professionals. It has been proven to increase scheduling efficiency, accuracy, and productivity, time and time again.

RUBIX:

- Combines schedule comparison, logic assessment and various P6™ utilities.
- Has an intuitive interface, with insightful reports.
- Can be used with any Primavera infrastructure model – EPPM or PPM; SQL Server, Oracle or SQLite.

RUBIX can connect directly with your Primavera Cloud account from Aegis, or any other publicly accessible database you are currently using (including all of P6™'s database formats – SQL Server, Oracle and SQLite). Alternatively, you can import schedule files directly into Rubix. XER, Microsoft Project, Asta and many other formats are supported.

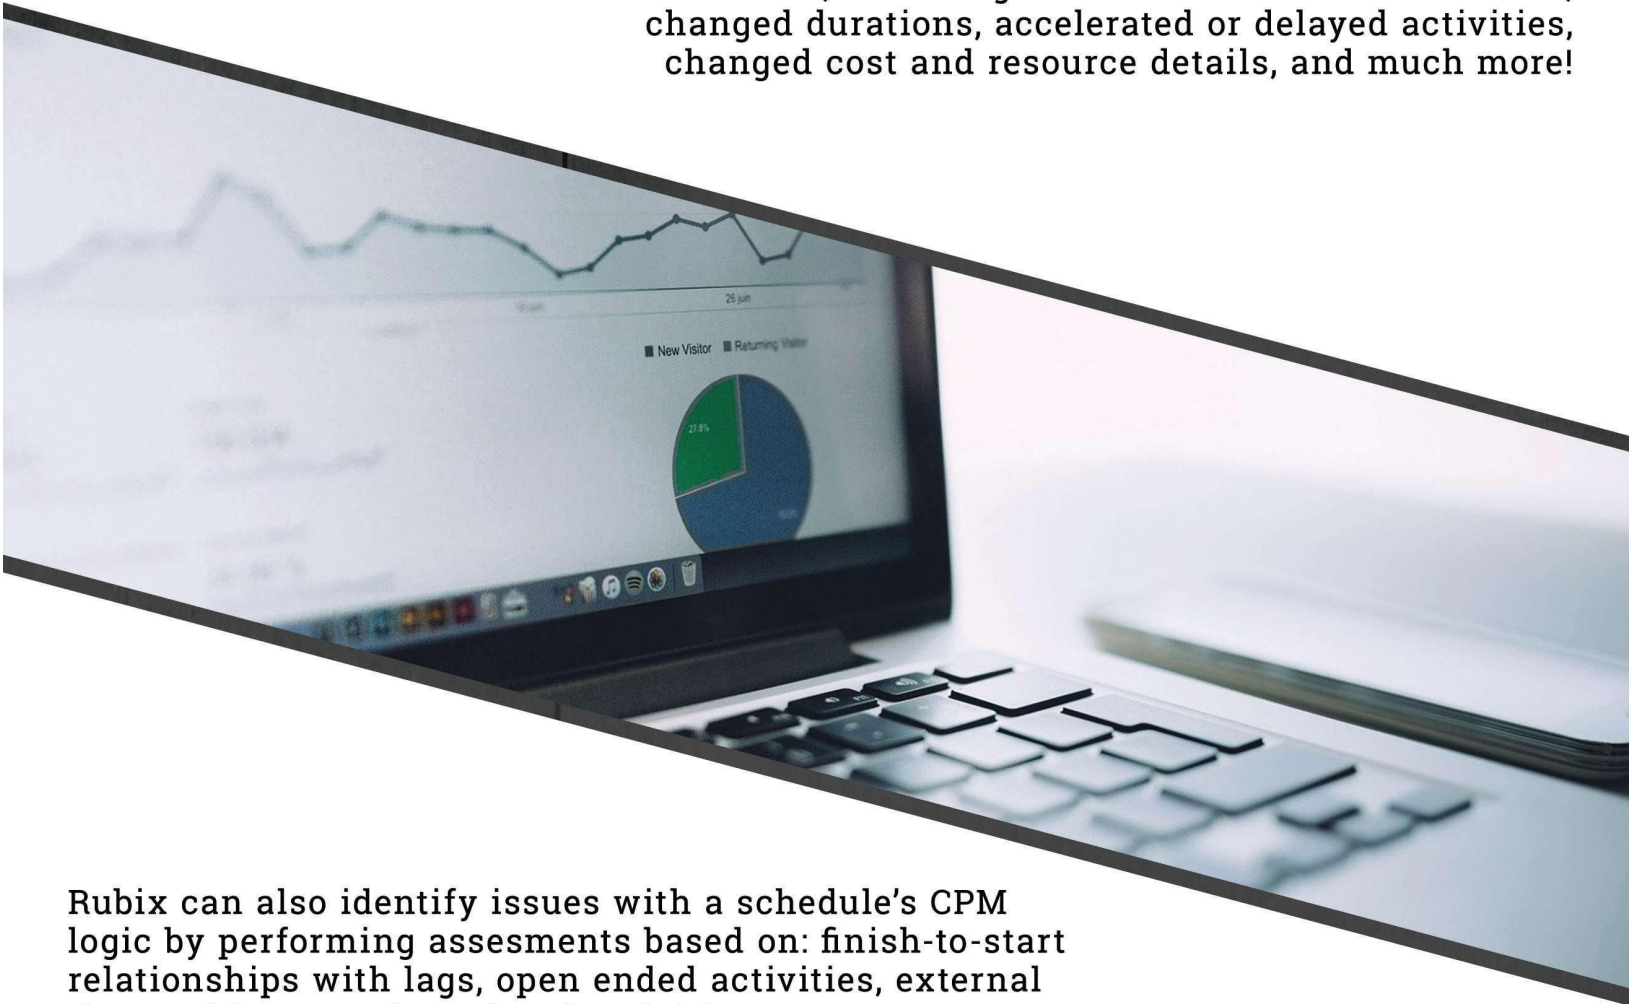

CONSULTAEGIS.COM

"Rubix is a game-changer for schedulers. It maximizes efficiency by checking for compliance with federal specifications and provides in-house schedulers with detailed feedback on the schedule's health and compares multiple project schedules for changes."

WHAT CAN RUBIX DO?

Rubix can compare two schedules based on a variety of criteria, including: added and deleted constraints, changed durations, accelerated or delayed activities, changed cost and resource details, and much more!

Rubix can also identify issues with a schedule's CPM logic by performing assessments based on: finish-to-start relationships with lags, open ended activities, external ties, and improperly updated activities, etc.

Rubix can check any schedule for compliance based on specification requirements from the U.S Department of Veterans Affairs (VA) and United Facilities Guide Specifications (UFGS).

CONSULTAEGIS.COM

WHAT CAN RUBIX DO?

Rubix includes several productivity and technical utilities.

The productivity utilities are proven to make a huge improvement to workflow. Some of the popular utilities are schedule calendar printing, file format conversions (MPP to P6, P6 to Asta, etc.), and global to project level codes/calendars conversion.

Rubix's technical utilities allow you to fix some common P6 issues quickly by yourself. Some of the useful ones are P6 user preferences reset (which is an umbrella fix for most of P6's performance issues), EAccess error fix, and invalid file fix (when you get that error from a file import into P6).

With an easy-to-use program like Rubix, considering its built in capabilities, as well as the added functionality when paired with P6™, any project team could easily increase scheduling efficiency and accuracy with the tap of a button.
